

CERES is part of the Soufflet Group, which is not only the market leader in Belgium, but also one of the most important market supplier in Europe. Daily, about 1.500 tons of wheat is processed at the Haren site alone, making it one of the bigger mills in Europe – and a major supplier for the bakery district.

The CERES production site in Haren, Brussels, is currently undergoing transformation - important investments are in process, some has already been taken place.

Those are both internal and external logistic problems which require urgent solutions.

CERES requested IPS to provide a long-term solution, keeping pace with current and future investment projects. IPS also prepared a budgetary estimate of the investment cost required for implementing the new logistics.

Logistic Study

CERES SA, Belgium, 2004
