

Mithra is a pharmaceutical company that focus exclusively on Female Healthcare. Active in 40 countries, Mithra Pharmaceuticals commercializes products and treatments in the following four therapeutical fields: contraception & fertility; menopause & osteoporosis; utero-vaginal sphere and female cancer.

In order to support the growing activities and portfolio, the building contains a large multipurpose manufacturing and packaging area for hormonal tablets, hormonal implants and injectable filling line, 2 warehouses, a quality control area, a R&D center and offices and canteen. One Mithra's main requests was the design of a flexible manufacturing area due the large product portfolio and the possibility for contract manufacturing.

One challenges of this project is to design a flexible facility that is capable of handling the large products' portfolio that Mithra is developing. Mithra Pharmaceuticals intends to extend the premises to formulate and produce injectable products in this facility in the future.
